Applications

Complete Intertie and Generator Protection

The SEL-700GT provides a complete intertie protection solution for distributed generation. Optional synchronous generator protection and synchronization provide complete generator and intertie protection in one compact and economical package.

The optional SEL-2664 Field Ground Module accurately detects field ground faults whether the generator is operating, stopped, or de-energized.

The application shown includes optional generator protection and synchronism-check voltage input (VS). Ethernet and EIA-485 are optional.

Also available are RTD and field ground module (SEL-2664) inputs (not shown).

Easy to Set and Use

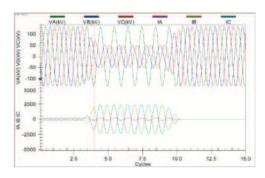

Use ACSELERATOR QuickSet® SEL-5030 Software to Set, Monitor, and Control the SEL-700GT

- Save engineering time while keeping flexibility. Communicate with the SEL-700GT through any ASCII terminal, or use the ACSELERATOR QuickSet graphical user interface.
- Develop settings offline with a menu-driven interface and completely documented help screens. Speed installation by copying existing settings files and modifying applicationspecific items.
- Simplify the settings procedure with rules-based architecture to automatically check interrelated settings. Out-of-range or conflicting settings are highlighted for correction.
- Use the AcSELERATOR HMI synchroscope to view the real-time synchronization process.
- Initiate the generator synchronization process using an HMI pushbutton.

Use ACSELERATOR Software to Retrieve and Display Event Reports Recorded by the SEL-700GT

- Display event report oscillograms. View each report as a plot of magnitude versus time.
 Select analog and digital points to build a custom display.
- Display phase and symmetrical component phasors. Display the phasor view of electrical data to better understand asymmetrical, three-phase faults. Build a custom plot using per-phase and symmetrical component sequence currents and voltages.
- Retrieve event reports using serial or Ethernet communications links.
